

FCC Statement

This device complies with part 15 of FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation. This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction guide, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and the receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult a service representative for help.

Properly shielded and grounded cables and connectors must be used in order to comply with FCC emission limits. LifeWorks is not responsible for any radio or television interference caused by using other than recommended cables and connectors or by unauthorized changes or modifications to this equipment. Unauthorized changes or modifications could void the user's authority to operate the equipment.

AC-Powered Devices

Failure to take the following precautions can result in serious injury or death from electric shock or fire, or in damage to the device.

- Use only the power supply unit and AC power cord that came with your device or from an authorized repair center.
- Confirm that your electrical outlet provides the type of power indicated on the power supply unit in terms of voltage (V) and frequency (Hz). If you are not sure of the type of power supplied to your home, consult a qualified electrician.
- Avoid non-standard power sources, such as generators or inverters, even if the voltage and frequency appear acceptable. Only use AC power provided by a standard wall outlet.
- Do not overload your wall outlet, extension cord, power strip or other electrical receptacle. Confirm that they are rated to handle the total current drawn by the device and any other devices on the same circuit.
- Protect the power cords from being walked on.
- Protect cords from being pinched or sharply bent, particularly where they connect to the power outlet, the power supply unit and the device.
- Do not jerk, knot, sharply bend or otherwise abuse the power cords.
- Do not expose the power cords to heat sources.
- Keep children and pets away from the power cords. Do not allow them to bite or chew on the cords.
- When disconnecting the power cords, pull on the plug; do not pull on the cord.

If a power cord or power supply becomes damaged in any way, stop using it immediately. Unplug your device during lightning storms or when unused for long periods of time.

document version number 0811-0

system requirements

- Windows® 2000, XP or Windows Vista®
or
Mac® OS X v10.4 or later
- USB port

setup

1 • verify package contents

2 • slide sides of cooling pad out to fit notebook and place pad under notebook

3 • connect USB cable

4 • turn on cooling pad

5 • (optional) connect AC adapter

Your cooling pad with 3 USB ports is also a USB hub and can be used to connect any device that consumes less than 100 mA (milliamperes)—including digital cameras, card readers, keyboards, mice, MP3 players, thumb drives and many other handheld USB devices—without using an AC adapter. When connecting other types of USB devices that consume more than 100 mA—such as external drives, printers, scanners or fax machines—connect the included AC adapter.

6 • connect devices

troubleshooting

| situation | try this |
|---------------------------|--|
| cooling pad does not work | <ul style="list-style-type: none">• Ensure the USB cable is connected properly.• Ensure the computer is on.• Ensure the cooling pad power is on. |
| USB devices do not work | <ul style="list-style-type: none">• Ensure the USB cable is properly connected to the cooling pad USB connection and a USB port on your computer.• Ensure the devices are connected properly.• Connect the cooling pad to a different USB port.• Connect the AC adapter, as described above in step 5, if you are using high power consumption devices (over 100 mA). |
